

EBUBO LANGUAGE

I have invented an artificial language called Ebubo. It is easy to learn because it is based on common stereotypes of modern human cultures. This HTML file is only 30 pages long and yet it contains a complete description of the language. Regardless of your mother tongue it will take you about a month to learn Ebubo. (It takes a year to learn Esperanto if you are not fluent in any European language.)

All words begin and end with a vowel. Numbers, colors, prepositions, pronouns, common adjectives, and common verbs are 3 letters long. Their meaning is fixed and listed in the following tables.

5-letter words and 7-letter words are coined by combining a vowel prefix with two or three syllables. For example, combining prefix **u** with syllable **su** (net) and syllable **bi** (animal) means "net animal" = spider.

7-letter words beginning with vowel-wu (**XwuXXXX**) are adjectives. 7-letter words beginning with vowel-wy (**XwyXXXX**) are verbs. Example: izewi = hope, iwuzewi = hopeful, iwyzewi = to hope.

All 5-letter words are nouns. 7-letter words which do not begin with vowel-wu or vowel-wy are also nouns. There is no official dictionary of the 5-letter words and the 7-letter words, so their meaning may be ambiguous. **Ebubo is fun to play with. You can either pick up an English word and try to figure out its Ebubo equivalent, or you can coin a new Ebubo word and try to guess its meaning.** The Ebubo language is NOT protected by copyright laws, so you are free to modify this web page and post it on your own web site.

[Justin B. Rye](#) contributed a few ideas to the Ebubo language.

Ebubo has a few flaws: there are few prepositions, the prefix table is complex, and the 7-letter adjectives and verbs have only two meaningful syllables. A new language called [Ygyde](#) has none of these flaws.

[Andrew Nowicki](#), August 19, 2002

Ebubo's alphabet consists of 6 vowels: **a e i o u y** and 10 consonants: **b p d g j l m s z w**. Capital letters and adverbs do not exist. Word **eba** means end of sentence. Double **eba** means end of paragraph or thought. Written text looks better when ordinary full stops are used instead of **eba**.

ALPHABET TABLE

All words are divided into classes determined by vowel prefix and length of the word:

PREFIX TABLE

vowel prefix	length of word	class
a	3	Numerals, time periods, colors, and common materials are listed in the decimal, octal, time, and color tables.
a	5	Nouns are coined from syllables listed in the adjective table and the cause column of the noun table.
a	7	Names of objects and species, e.g., Milky Way Galaxy, Nile River, Minneapolis, Snow Goose. There are two exceptions: syllable wu means ordinary adjective and syllable wy means ordinary verb. wu (or wy) is always the first syllable and the rest is treated as ordinary 5-letter word.
e	3	Prepositions and pronouns are listed in the preposition and pronoun table.
e	5	Nouns are coined from syllables listed in the adjective table and the result column of the noun table.
e	7	Names of people and pets, e.g., Andrew Nowicki. One word means first name. Two words mean first and last name. There are two exceptions: syllable wu means ordinary adjective and syllable wy means ordinary verb. wu (or wy) is always the first syllable and the rest is treated as ordinary 5-letter word.
i	3	Adjectives are listed in the adjective table.

- i 5 **Nouns** are coined from syllables listed in the **cause** and **result** columns of the noun table.
- i 7 **Nouns** are coined from syllables listed in the **adjective** table and the **cause** and **result** columns of the noun table. There are two exceptions: syllable **wu** means adjective and syllable **wy** means verb. **wu** (or **wy**) is always the first syllable and the rest is treated as a 5-letter word.
- o 3 **Adjectives** are listed in the **adjective** table.
- o 5 **Nouns** are coined from syllables listed in the **result** and **cause** columns of the noun table.
- o 7 **Nouns** are coined from **two** syllables listed in the **adjective** table and one syllable listed either in the **cause** or **result** column of the noun table. There are two exceptions: syllable **wu** means adjective and syllable **wy** means verb. **wu** (or **wy**) is always the first syllable and the rest is treated as a 5-letter word.
- u 3 **Verbs** are listed in the adjective table.
- u 5 **Nouns** are coined from **two** syllables listed in the **cause** column of the noun table.
- u 7 **Nouns** are coined from **two** syllables listed in the **cause** column of the noun table and one syllable listed either in the **adjective** table or **result** column of the noun table. There are two exceptions: syllable **wu** means adjective and syllable **wy** means verb. **wu** (or **wy**) is always the first syllable and the rest is treated as a 5-letter word.
- y 3 **Verbs** are listed in the adjective table.
- y 5 **Nouns** are coined from **two** syllables listed in the **result** column of the noun table.
- y 7 **Nouns** are coined from **two** syllables listed in the **result** column of the noun table and one syllable listed either in the **adjective** table or **cause** column of the noun table. There are two exceptions: syllable **wu** means adjective and syllable **wy** means verb. **wu** (or **wy**) is always the first syllable and the rest is treated as a 5-letter word.

Examples: ibibe = animal food, obebi = "food animal" = cow, izagypu = "colorful angle light" = dispersion of light.

7-letter long words beginning with letters **o**, **u** and **y** seem ambiguous because they define two different words. This ambiguity is resolved by order of syllables taken from the same column. Forward syllable order means that the syllables are in alphabetical order, e.g., **bebi**. Backward syllable order means that the syllables are in reverse alphabetical order, e.g., **bibe**.

ORDER TABLE

double syllable location	double syllable order	remaining syllable location	examples
adjective table	forward	cause column of the noun table	omowawe = "sexual feminine medical knowledge" = female gynecology
adjective table	backward	result column of the noun table	owamowe = "feminine sexual medical substance" = contraceptive pill
cause column of the noun table	forward	adjective table	uluwesy = "expert medical knowledge visual" = ophthalmologist
cause column of the noun table	backward	result column of the noun table	uwelusy = "medical knowledge expert conflict" = disagreement between physicians
result column of the noun table	forward	adjective table	ybubyze = "genetics disease stupid" = genetic mental retardation
result column of the noun table	backward	cause column of the noun table	ybybuze = "disease genetics philosophy" = philosophy based on genetic diseases

If a 7-letter word begins with letter **o** and has two identical syllables taken from the adjective table, the two syllables have different meaning and the last syllable is taken either from the **cause** or **result** column of the noun table. For example, **olulusa** can mean either "old slow computer" or "old slow software." These words should not be used to avoid ambiguity.

A single word can be used to describe scientific name of a genus:

first syllable = kingdom and phylum

second syllable = class and order

third syllable = family and genus.

Two words are needed to describe a species.

Decimal system is best when Ebubo is used for translation. When Ebubo is used as a native language, octal system is better, because it is compatible with computers and has simpler multiplication table. The octal system does not have digit eight and digit nine. Our Sumerian units of time and medieval calendar should also be replaced with an octal system.

PREPOSITION AND PRONOUN TABLE

word	meaning	word	meaning
eba	end of sentence	ebe	indicates that a foreign word follows this word
ebi	indicates that following word is name of a material	ebo	let (order)
ebu	suggestion or polite order	eby	first word in a general question, answer is yes or no
epa	first word in a specific question, answer is detailed	epe	by
epi	of, associated with, about	epo	for
epe	below	epy	on
eda	above	ede	in, inside
edi	between, among	edo	out, outside, beyond
edu	behind, after, previous	edy	in front of, before, next
ega	on the left side	ege	on the right side
egi	from	ego	to, toward
egu	if	egy	and
eja	or	eje	then
eji	when	ejo	because
eju	in order to	eju	yes
ela	despite	ele	no, not
eli	few	elo	several
elu	more than several	ely	less
ema	more	eme	all
emi	except	emo	very
emu	extreme	emy	as, so
esa	-st, -nd, -rd, e.g., 22-nd	ese	times, e.g., 5 times
esi	this	eso	which
esu	I, me	esy	my
eza	you (singular)	eze	your (singular)
ezi	he, she	ezo	his, her
ezu	it	ezy	its
ewa	we	ewe	our
ewi	you (plural)	ewo	your (plural)
ewu	they	ewy	their

Prepositions are used the same way as in the English language except **emu** (extreme).

Although there is no distinction between singular and plural nouns, the plural nouns follow either a number, or preposition **elo**, or preposition **elu**.

Preposition **agu** followed by verb indicates past tense. Preposition **agy** followed by verb indicates future tense. The absence of **agu** and **agy** indicates present tense.

Grammar explained in examples:

- esu ulo ija eji esu usy eza eba** I am happy when I see you.
ewa uwi ede ebe america eba We live in America. (ebe indicates foreign word)
ebo usy esi awyla eba Clean up this room. (order)
ebu usy esi awyle eba It would be desirable to clean up this room. (suggestion)
eby eza agy usi esi awyle eba Will you clean up this room? (general question)
epa esi awyle eba Tell me about this room. (specific question)
esu agy usi esi awyle eba I will clean up this room.
esu iwy agy usi esi awyle eba It is impossible that I will clean up this room.
esu odo agy usi esi awyle eba It is unlikely that I will clean up this room.
esu odu agy usi esi awyle eba It is likely that I will clean up this room.
esu ogi agy usi esi awyle eba It is certain that I will clean up this room.
esu agu usi esi awyle eba I cleaned up this room.
ebo ele usi esi awyle eba Do not clean up this room. (order)
epa abebe ulo emu ipe eba Which tree is the tallest? (specific question)
api esa abebe ulo emu ipe eba Second tree is the tallest.
epa eguwy abebe ulo ede esi apepo eba How many trees are in this forest? (specific question)
odu age eba Probably one million.
epa uwywy elu abebe ulo ede esi ajube eba Why trees live in this wilderness? (specific question)
eza agu uze esi azewy age ese eba You asked this question million times!
apubi ile esy awowi ule ewyja eligona eba Bird owned by my father has name Eligona.
